Measures Used

2 x 2 Contingency Table

Observations \ Forecasts			
	A	B	C = A +B
	D	E	F = D + E
	G = A + D	H = B + E	I = C + F

- **Chi-Square** – used to test for statistical significance. Answers the question, “Do we have a large enough sample to know our results are conclusive?”.
- **Heidke Skill Score** – used to test whether we are beating persistence or climatology.
- **Bias** – used to determine whether we are over-forecasting or under-forecasting.

Review

- HWD – Still limited opportunities beyond 12 hour forecast period. Doing better with refining areas associated with air mass thunderstorm activity, but still over forecasting.

- TSTMS – Saw a decrease in skill due to difficulty narrowing down air mass, most of our areas are too large. Also with focus on air mass we missed some S/W activity.
